

I CLAIM:

1. A moveable children's potty training chair with bottom-rinsing function comprising: a toilet seat body formed in one piece, with a leading opening in the center of the toilet seat body; a gathering basin
5 is installed beneath the leading opening, with a power source and rinsing button installed on the surface of the toilet seat body where it touches the skin, a sprinkle-nozzle is also installed at the rear of the toilet seat body, and a water-storage tank is installed inside the body, with the water inlet of the water-storage tank installed with a
10 stopper, the water outlet of the water-storage tank is connected to the pumping motor with a duct, and the water outlet of the pumping motor is then connected to the sprinkle-nozzle with a conduit, so when the children need to rinse their bottom after going to the toilet, all it requires is a gentle push of the rinsing button, and water from
15 the water-storage tank will be pumped to the sprinkle-nozzle by the pumping motor to rinse clean the anus.
